

“Clip ‘n Easy™ “ DISTEC’s Glueless Board

As a leading innovator in outdoor advertising DISTEC has developed a new dry-poster system, characteristically called **Clip ‘n Easy™**.

The new **Clip ‘n Easy™** system can be mounted onto existing billboard frames in sizes up to 12x3 meters (96-sheet).

With this innovation, DISTEC is offering a „green & clean“ alternative to conventionally glued poster boards. Glued posters are neither economical nor green. Thus, outdoor advertisers have been looking for new solutions and, of course, they can find the adequate answer at DISTEC.

DISTEC’s glueless **Clip ‘n Easy™** system is, moreover, not only „green & clean“, but it is at the same time very effective and economical:

It allows changing the poster even by one man only.

The poster does not need any particular finishing: No jonc, eyelets, rand, velcro or whatever. Advertising companies are flexible in buying their print wherever they want to.

As an option, energy-saving and eco-friendly LED lighting is available.

Clip ‘n Easy™

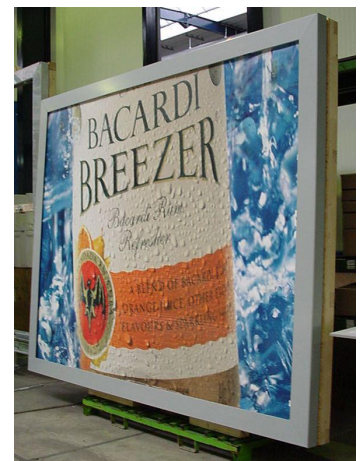

The innovative upgrade for your outdoor billboards

- No more glue!
- Makes poster finishing redundant (no keder, no eyelets, no perforation etc.)
- Avoids unclean and sloppy billposting

Instead:

- Easy and quick poster change, simple to use
- Perfect fit and tensioning
- Green & Clean
- Enhanced look
- Customized formats
- Energy-saving and eco-friendly LED lighting available as an option

Make it right: Clip it!

LED: The Lighting Solution for the Future

With the partner company „Enbluetec“, DISTEC is offering to their clients the option to use LED lighting instead of conventional fluorescent light tubes.

This is a further approach for a „green & clean“ environment.

On top, it will also save money....

DISTEC has successfully tested LED light tubes for single- and double-sided use which can easily be installed into standard fluorescent lamp fixtures.

These LED light tubes offer the possibility to retrofit almost every unit on the street. Installation is fast and simple.

Our „enblue“ power LED-tubes, also available double-sided, with a beam angle of 2 x 120°, will combine a nice and pane illumination of signs with valuable savings in energy and CO² emission as well as an extended product life. For further details, please check out the website under www.enbluetec.com.
